PROFESSIONAL SUMMARY

Backend-focused Software Development Engineer with hands-on delivery in Java, Spring Boot, and full-stack MERN applications. Experienced in building RESTful APIs, ML-backed prediction services, and location-aware platforms. AWS Certified Cloud Practitioner and Oracle Generative AI Certified Professional. Strong academic record (MCA CGPA: 9.19) with a proven ability to design scalable, maintainable backend systems.

TECHNICAL SKILLS

Languages:	Java, Python, JavaScript, Bash	**Databases:**	MySQL, MongoDB, Redis
Backend:	Spring Boot, FastAPI, Node.js, Express.js, RESTful APIs	**Cloud & DevOps:**	AWS (EC2, S3, IAM), Docker, GitHub Actions, CI/CD
Frontend:	React.js, HTML, CSS, TailwindCSS	**Core CS:**	OOP, Collections, Multithreading, DSA, DBMS, OS, Networks

CERTIFICATIONS

AWS Certified Cloud Practitioner	*Amazon Web Services (AWS)*	2025
Oracle Generative AI Professional	*Oracle Corporation*	2025

INTERNSHIP EXPERIENCE

Full Stack Developer Intern — *Svarks Technologies* Nov 2024 – Jan 2025

- Designed and delivered **10+ RESTful APIs** in Java and Node.js powering core features across multiple client-facing web applications.
- Optimised MySQL schemas and queries through targeted indexing and refactoring, **reducing average read latency by ~30%**.
- Collaborated in a 5-person Agile team via Git/GitHub, contributing to sprint planning, daily standups, and bi-weekly code reviews.

PROJECTS

Agriculture Equipment Rental System *MERN Stack | REST APIs | Geolocation* github.com/Marcos-sf/agri-rental

- Built a full-stack platform enabling **500+ rural users** to discover and book nearby equipment, with **15+ REST endpoints** covering listings, bookings, and live availability.
- Integrated Haversine geolocation search to surface equipment within a configurable radius, **cutting average search time to under 2 seconds**.
- Architected a modular MVC backend with clean service/controller separation, allowing new feature modules with **zero changes to existing routes**.

Crop Price Prediction System *Python | FastAPI | Scikit-learn | ML* github.com/Marcos-sf/crop-price-predictor

- Trained ML regression models on **5+ years of historical market data**, achieving **MAE under 8%** for 1-month crop price forecasts.
- Exposed RESTful prediction endpoints for 1, 3, 6, and 12-month horizons via FastAPI, delivering **real-time inference in under 200 ms** per request.
- Structured API with Pydantic validation and versioned routes, making it production-ready and extensible to new crop categories.

TCP Client–Server File Transfer System *Python | Socket Programming | TCP/IP* github.com/Marcos-sf/tcp-file-transfer

- Built a reliable file-transfer system using raw Python sockets with chunked transmission and ACK-based error handling, transferring files **up to 500 MB** without data loss.
- Deepened understanding of TCP/IP internals, flow control, and connection lifecycle — directly applicable to backend networking and distributed systems work.

EDUCATION

Master of Computer Applications (MCA), *Bangalore Institute of Technology* **CGPA: 9.19** 2023 – 2025

Coursework: Data Structures, Algorithms, OS, DBMS, Software Engineering

Bachelor of Computer Applications (BCA), *JSS SMI UG & PG Studies* **CGPA: 8.66** 2020 – 2023

Coursework: Java Programming, Databases, Web Technologies
